

ARL PROTOCOL

ARL

The utility token for decentralized AI and compute services, on Base.

Fixed supply of 21,000,000 ARL · Live on Base Sepolia · Base Mainnet TGE 1 November 2026

WHY

AI services need open, per-use payments

The problem

AI and GPU capacity are sold through closed accounts, monthly plans and card payments. Agents and small providers cannot pay or be paid per request, and buyers cannot check who they are paying.

ARL

One token on Base for AI and compute: pay per request over x402, find services in an open registry, hire them through an escrow, and rate them after paying.

- Built on open standards, not a closed platform
- Low fees and fast settlement on Base, an Ethereum L2

Open standards around one token

x402 payments

AI services paid per use in ARL,
settled with Permit2
(@ar1/payments).

ERC-8004 registry

Service identity and reputation,
rated by paying clients.

ERC-8183 escrow

Jobs paid into escrow and released
on delivery (ARLJobs).

Compute

GPU and CPU capacity paid per
second.

Staking

Synthetix-style staking rewards
(ARLStakingRewards).

ZK signals

Anonymous polls with Semaphore
and Noir proofs.

Status: contracts and packages written and tested; token system live on Base Sepolia. Services are not live yet.

TOKEN

21,000,000 ARL, minted once

Allocation	ARL
Public Launch	5,000,000
Community & Staking	3,000,000
Founder	2,100,000
Ecosystem & Growth	2,000,000
Strategic Partnerships	2,000,000
Liquidity	2,000,000
Investors / Strategic Capital	1,500,000
Early Users	1,100,000
Treasury	1,000,000
Team	900,000
Grants / Bug Bounty	400,000

- ERC-20 with EIP-2612 permit, 18 decimals
- No owner, no mint, no pause, no upgrade
- Circulating at TGE: 2,100,000 ARL before Public Launch claims
- Investors and partners: 12-month cliff, then 36 months linear
- Treasury behind a 48-hour timelock with a cancel-only guardian
- Allocations held by dedicated 2-of-3 Safes, vesting wallets and the timelock

Checked in the open

Done

254 contract tests with fuzzing and invariants · Slither with no findings · Halmos symbolic proofs · Aderyn · reproducible bytecode · deployment rehearsals · contracts source-verified on Basescan, Blockscout and Sourcify · public repository with CI.

Not done

No independent audit has been performed. Requests for an audit went to Hacken, Nethermind and Runtime Verification on 5 October 2026. A bug bounty paid in ARL (up to 40,000 ARL for a critical finding) is open.

OpenZeppelin v5.6.1 contracts, unmodified · Safe v1.5.0 canonical contracts · solc 0.8.36

STATUS

Where ARL is today

Phase	Status
Phase 0 · Foundation	Complete
Phase 1 · Token contracts	Complete
Phase 2 · Security review	Internal review complete; independent audit requested
Testnet	Live on Base Sepolia since 4 October 2026
Mainnet (TGE)	Target 1 November 2026
AI payments and compute	Next

LAUNCH

TGE on 1 November 2026

Liquidity from day one

The Liquidity Safe opens ARL/USDC, ARL/USDT, ARL/ETH and ARL/BTC pools on Uniswap v3 on Base. Each holds only ARL and starts at 0.20 USD per ARL, so nothing in them is sold below that floor. Fork-tested on Base.

Public Launch

Up to 500,000 ARL claimable for free by whitelist sign-ups at the TGE, at most 10,000 ARL per address, for 60 days. The rest of the Public Launch allocation is available for a launchpad sale.

Listing price: **0.20 USD** · Fully diluted value at that price: **4,200,000 USD**
